

Cricket

- Bowler pitches the ball underhand; trying to hit the wicket.
- The bowler rotates from one wicket to the other, after each out or hit ball.
- There are two (2) batters, one at each wicket, in the batter's box.
- Batter defends the wicket, using the bat, similar to a golf swing, not a softball swing; bat is kept low.
- May hit in any direction.
- Once the ball is hit BOTH batters either run to the opposite wicket, or they stay in the batter's box.
- If they run, they BOTH must run-may not have more than one (1) batter at each wicket.
- Defense gets the offense out, by touching the wicket with the ball while the batter is outside of the batter's box. May get both batters out.
- Each time the batters safely move to the opposite wicket/batter's box, they score a run.
- Newer batter comes in as the 2nd hitter, after an out, or a score.
- Four (4) batters up, then rotate defense and offense.
